

GUSSTECH Sp. J. represents on the Polish market:

- RAMPF Tooling Solutions GmbH & Co. KG, the world's largest producer of board, Close Contour, and liquid materials for modeling and mold engineering as well as composites part design, engineering, and manufacturing expertise for the aerospace and medical industries.
- Munch Chemie International GmbH - supplier of professional chemistry.
- Wela GmbH - supplier of fabrics: carbon, glass, Paraglass and Paratank.

GUSSTECH Sp.j. cooperates also with HUFSCHMIED Zerspanungssysteme GmbH - manufacturer of high quality tools for processing materials used to tool-, mold-, models- and prototypes-making.

The NEW product of RAMPF Tooling Solutions: RAKU® TOOL WB-0890 epoxy board, which was specially developed for the composite industry. The board has an extremely fine surface structure, which significantly reduces both finishing and the amount of sealer that has to be used. Furthermore, the surface finish can be transferred from the master model to the prepreg mold, so that no

re-sanding of the mold is required and the service life of the prepreg molds is significantly increased. The board is easy and quick to machine and compatible with all industry-standard paints, release agents, and epoxy prepregs. Glass transition temperature T_g is 110 °C.
