

LINETECH Aircraft Maintenance is a MRO service provider (Maintenance, Repair, Overhaul) for the most popular types of narrow-aisle passenger airplanes. Together with Slovenian sister company Adria Tehnika, they create a group capable of handling machines such as Boeing 737, A320 airbus, jets from the Embraer brand or the Canadian Bombardier CRJ series. The company has a main base in Katowice. Its largest branch is located in the hangar at Rzeszów - Jasionka Airport. Adding the capabilities of Adria Tehnika, the Group can service up to 18 jets.

In total, the companies provide MRO services to over 75 clients, including EasyJet, Lufthansa, SAS, Finnair or the largest Polish charter carrier, Enter Air.

LINETECH is present at the airport in Rzeszów since 2015, in Katowice - from 2012. At that time, the company contributed directly or indirectly to the creation in the regions of up to 2000 jobs, and practices developed in one province, for example in the matter of cooperation

with schools, is also possible to transfer to other areas of the company's operations. As a responsible employer, LINETECH provides training and internships for its patron classes, training a new generation of aircraft mechanics and engineers servicing passenger jets.

One of the main LINETECH interests is the area of composites. Modern aviation is based on these materials, and their repair and maintenance brings about as much valuable information about "life" and the use of composites in aviation as research work and tests in laboratory conditions. Apart from huge differences in pressures, temperatures, air resistance and many other factors, planes and their composite shell elements are in almost constant motion. LINETECH and its specialists in this field are convinced that the observations and experience gained while servicing aircraft are key to further improving their use in aircraft constructions. Being one of the first partners of the Polish Composite Cluster, LINETECH carries out this mission.
