

Uniserv S.A. is the head of the Capital Group consists of: Uniserv Budownictwo S.A., Uniserv Jarosław Sp. z o.o., Prowbud Sp. z o.o., Dynamiks Sp. z o.o., Projchłod Sp. z o.o.

As a Group, we provide specialist services for the industry in a unique manner, by combining technological competences with engineering and construction potential, which enables independent provision of comprehensive services to clients.

UNISERV S.A. is a specialised company providing services relating to water cooling systems, industrial stacks, silos and industrial furnaces as well as production lines for several industrial sectors. The company also develops environmental installations and renewable energy sources. The group has its own modern technical solutions for devices constituting the cooling facility equipment. It is also in possession of constantly

improved specialist devices used for efficient erection of large-size reinforced concrete structures (cooling tower shells, stacks, etc.).

The company works for enterprises operating in the following sectors: professional and industrial power sector, smelting, chemical and petrochemical industry, steelworks, non-ferrous metal smelting plants, coking plants, cement plants and also other industrial and manufacturing plants.

Combination of technological, engineering and construction services is made possible by an experienced team that covers all the investment execution chain links, from designers to people who directly supervise the works at the facility, as well as by a proven group of collaborating subcontractors.
