

## Innovation

We are a manufacturing company specialized in industry composite parts production. With more than 25 years of experience in composite manufacturing we've always been motivated by the need to innovate and pursue the latest technologies. As one of the first companies in Poland – we have introduced the LRTM technology to our company moving more than 80% of our production from Hand Lay-Up process to that new, cleaner and more reliable one. This change helped us reaching our goal to always offer the best quality of products.

## Conducore & lean manufacturing

Thanks to that need to always stay ahead, we have also patented CONDOCORE – our own technology. It allows us to make composite parts in resin injection technology (LRTM) that will provide strictly required surface resistance values while maintaining the high durability that

can furthermore be combined with additional properties like fire redundancy. CONDOCORE is a go to solution for all the companies that are looking for a reliable applications for their ESD zone production lines as we can offer a low volume, tailor made units that will improve the quality of their workspace.

## Cooperation

We are always looking forward to establish a cooperation with other companies for whom our product will deliver a suitable solution. We offer more than that, as we start our cooperation when there's only an idea or merely a sketch. We help our clients to make it into a final product and support them in further challenges.
