## Composite Industry Luxembourg (CIL) has been created in the context of the Luxembourg National Composite Initiative.

CIL brings together the core skills of Luxembourg's composite industry and acts as a catalyst for further development. It defines and executes joint projects and provides networking and incubation opportunities as well as consulting and training. All activities are focused on aspects related to new composite materials, based on nanotechnology, bio-based resources, chemistry, engineering, material science processing and manufacturing.

## The main missions of CIL include:

- Promoting Luxembourg's composite industry
- Analysing trends in the field of composite materials related to production, modification, characterisation, application and end-of-life valorisation
- Mapping industrial needs
- Analysing the composite materials market
- Launching industry-oriented R&D and innovation projects, jointly driven by two or more companies
